Prepare a reliable import

The rule is approved. The team still has to find the affected rows before import.

Fictional example

Savonnerie · 16 packaging updates across 40 rows. Two ambiguous references stay untouched.

Find 00101 in a paper band and 00119 unchanged in the report.

00101	Cardboard sleeve → Paper band · 75 g
00119	Packaging varies by batch → original value retained

€1,260 · full scope, no VAT

One rule, one field and one language, up to 200 export rows and 20 affected references. Corrected CSV, differences and exceptions.

In the stated scope, the brand controls sending, distribution or import. No third-party charge in this example. €630 after signing and €630 within 14 days of full handover.

The smallest useful scope

Our rows are known and we can check the replacement in-house. Keep this in-house · €0 to CP360.

To agree the date

Current export and approved rule. CP360 finds the rows after engagement. The brand receives one selection to approve. CP360 then applies the rule and checks the remaining cells. The brand decides when to import. Jérémie confirms date and budget in writing before signature.
